for the six month period ended 30 June 2024

Performance to 30 June 2024

	Six months	<u>1 year</u>	<u>3 years</u>	<u>5 years</u>
IFSL Marlborough High Yield Fixed Interest Fund	2.27%	11.94%	6.69%	19.59%
IA Sterling High Yield sector	3.38%	10.82%	4.23%	15.33%

External Source of Economic Data: Morningstar (P Income - quoted price to quoted price, net income reinvested).

The performance figures above are based on quoted prices and will, therefore, differ from the performance in the Comparative Table.

Capital at risk. Past performance is not a reliable indicator of future performance; the value of your investment and any income from it can go down as well as up. Performance returns are based on the net asset value with distributable income reinvested and take account of all ongoing charges, but not entry charges (if applicable). The past performance of this unit class is calculated in sterling.

Investment commentary

Performance Statement

Over the period under review, the Fund returned 2.3%. This compares with a return of 3.4% for the benchmark*, the Investment Association Sterling High Yield* sector.

Market Review

The European high yield market was on the back of eight consecutive positive monthly returns. BB-rated credit risk* companies generated a return exactly in line with the wider market after performing more strongly earlier in the period, as the broader market suffered from increased volatility. Lower-rated credit risk companies (including CCC's) performed better later in the period with CCCs returning more than 2.0% in both May and June as the economic environment stabilised. Markets were driven by supportive inflation data and weakening economic activity in the US which supported higher risk assets, such as high yield and equities, across the board as interest rate hike expectations receded. B-rated bonds were the notable underperformers both in the second quarter and year-to-date with returns of 1.5% and 2.8% respectively.

One notable theme of the European high yield market this year has been the dramatic pick-up in new issues after two muted years. Issuers are beginning to refinance bank loans with bonds but there's also a gradual increase in takeover activity using high yield bonds. Net issuance in the quarter, which considers bonds issued and maturing, came in at €8bn. The year-to-date net total was €13bn. This is an encouraging sign, after negative net issuance in 2022 and 2023 which had contributed to a shrinkage in the size of the market since the end of 2021 of more than 20%.

When looking at sector returns, real estate has been the standout performer with a six month return of 24% after a number of companies with low credit ratings rallied dramatically (more than 100% in some cases) on a better than expected ability to both sell assets and to realise higher than expected valuations for those assets. Telecommunications, financial services and technology all posted negative returns driven almost entirely by significant losses at large companies such as Altice France, Intrum and Atos.

Fund Performance and Activity

The largest single positive contributor to performance against the benchmark came from a rally in Telecom Italia bonds after the company was split in two with KKR having agreed to acquire the network infrastructure assets owned by the company. Our lack of exposure to Altice France and Thames Water generated positive performance relative to the benchmark as those capital structures continued to decline in value. By the end of the period the Thames Water holding company bonds were trading at a price of £7 for every £100 received at maturity, implying the market believes the company is close to default. The Fund exited the position a year ago with a price in the £50 range.

There were a number of holdings that cost the Fund in terms of performance against the benchmark in the period including Profine, Arrow and HSE. Profine, the PVC window panelling business, saw their earnings decline due to weakness in the construction markets and a lack of rebound in the German economy. Arrow, the debt collector, suffered by association after the problems suffered by others in the sector most notable of which is Intrum. HSE, the TV retailer, has experienced a drop in earnings post-Covid and due to consumer weakness in Germany which is by far their most important market. We are positive about these companies going forward.

The Fund was extremely active in the period investing in eighteen newly issued bonds from sixteen issuers. Most of these have performed very well after issuance and we expect the primary market to be a continued source of positive performance against the benchmark over the remainder of the year. It is also encouraging to see so many new names enter the Fund which improves the profile of the portfolio from a diversification perspective but also from a returns perspective as issuers tend to price attractively when they are new to the market.

We took new positions in Asda on valuation grounds though it is undeniable the company is undergoing a difficult period from a market share perspective. We partially covered the underweight to CPI and SBB in the real estate sector given the low cash price of those bonds and the potential for further corporate action. Finally we bought new positions in Q-Park, the car park operator, and Ceramtec, the industrial and healthcare ceramics business, as a result of the strong operational performance at both companies.

AUTHORISED INVESTMENT MANAGER'S REPORT

for the six month period ended 30 June 2024

Investment commentary

Fund Performance and Activity (continued)

With regards to exits, we sold out of Ardagh Glass secured* bonds given the risk of the value falling should the shareholder decide to act against the best interest of bondholders as well as the risk of them cutting the dividend the company receives from Ardagh Metals. Both are packaging companies controlled by the same individual. We sold our holding in Cerba subordinated* bonds given the drop in post-Covid earnings for the lab diagnostics business and the company's significant debt position. The bonds' price had increased significantly in the run-up to our exit. Finally, we sold our small position in the debt collector DDM to take advantage of liquidity in the bonds given concerns around the quality of their loan book.

Investment Outlook

Although there is still room for some mild spread*reduction, we think the next leg of the rally in credit markets will come from a repricing of interest rate expectations lower. This repricing trade thus far has been a categoric failure so far this year and investing in corporate bonds has been the place to be in fixed income. However with disinflation gathering steam again more recently, cracks in the job markets starting to show (albeit faintly) and a slowing of activity in the US, it feels like the seeds are being sown for a more sustainable rally in government bonds which will help all fixed income markets. We continue to like higher yield bonds given the income available supported by a low risk of high yield bonds defaulting.

Aberdeen Asset Managers Limited 18 July 2024

*Explanation of terms

Benchmark - used for performance comparative purposes.

High-yield - issued by companies with low credit ratings and therefore need to pay higher interest as incentive to purchase. Higher default risk than investment grade bonds, which have a higher credit rating.

Credit rating - a grade given to bonds that indicates their credit quality.

Secured - loans that are secured by a specific form of collateral.

Subordinated bonds - a debt which is repaid after other debts if a company falls into liquidation or bankruptcy.

Spread - the difference in yield between two debt securities of the same maturity but different credit quality.

AUTHORISED STATUS

IFSL Marlborough High Yield Fixed Interest Fund (the Fund) is an authorised unit trust scheme within the meaning of the Financial Services and Markets Act 2000 and is a UCITS scheme operating under the Collective Investment Schemes Sourcebook (COLL) as issued by the Financial Conduct Authority.

GENERAL INFORMATION

Investment objective

The investment objective of the Fund is to provide investors with income, that is, money paid out of your investment as interest, as well as the opportunity for some growth over a period of five or more years, however, there is no certainty this will be achieved.

Investment policy

At least 80% of the Fund will be invested in high yield bonds issued by companies and institutions. These will be sub-investment grade or unrated bonds, which are loans issued by entities which can be more vulnerable to changing market conditions that typically pay higher rates of interest than investment grade bonds.

The Fund may also invest in investment grade bonds, bonds issued by governments, bonds which may be converted into shares (known as convertible bonds), preference shares, permanent interest bearing shares and money market instruments (which are shorter term loans). Whilst the Fund will not buy shares in companies there may be times where the Fund holds shares following a restructuring of an existing holding.

The Fund is actively managed which means the investment team decides which investments to buy or sell and when. Investment decisions are taken based on individual company research in addition to the team's view on global economic and market conditions.

The investment manager uses the ICE Bank of America Merrill Lynch European Currency High Yield Constrained (hedged to sterling) Index as a reference point when constructing the portfolio and for risk management purposes.

The Fund uses derivatives (instruments whose returns are linked to another asset, market or other variable factor) and forward transactions linked to exchange rates, for the purposes of efficient portfolio management in order to reduce currency risk in the Fund, also known as hedging.

The Fund will typically hold less than 5% in cash to enable the ready settlement of liabilities, for the efficient management of the Fund and in pursuit of the Fund's objectives although may occasionally exceed this figure.

Assessing performance

The Investment Association (IA), the trade body for UK investment managers, has created a number of 'sectors' as a way of dividing funds into broad groups with similar characteristics.

The Fund's investment policy puts it in the IA Sterling High Yield sector. You may want to assess the Fund's performance compared to the performance of this sector.

Rights and terms attaching to each unit class

A unit of each class represents a proportional entitlement to the assets of the Fund. The allocation of income and taxation and the rights of each unit in the event the Fund is wound up are on the same proportional basis.

Taskforce on climate related financial disclosures

A statement of the climate-related financial disclosures is published on the website https://www.ifslfunds.com/tcfd-reporting.

Changes in prospectus

No significant changes have been made since the last annual report.

Up to date Key Investor Information Documents, Prospectus and Long Reports and Financial Statements for any fund within the AFM's range, can be requested by the investor at any time.

DIRECTORS' STATEMENT

This report has been prepared in accordance with the requirements of the Collective Investment Schemes Sourcebook as issued and amended by the Financial Conduct Authority.

^A The return after charges is calculated using the underlying investments bid prices

Operating charges are normally the same as the Ongoing Charges Figures (OCFs) and are the total expenses paid by each unit class in the period. Where it is considered unsuitable to use the total expenses paid by each unit class in the period to calculate the OCF because of material changes to the Fund's charges an estimate will be calculated instead. The OCFs disclosed in the Key Investor Information Document (KIID) (available on IFSL's website, www.ifslfunds.com) give an estimate of future costs.

Direct transaction costs are the total charges for the period, included in the purchase and sale of investments in the portfolio of the Fund. These amounts are expressed as a percentage of the average net asset value over the period and the average units in issue for the pence per unit figures.

^B These figures have been annualised.

SYNTHETIC RISK AND REWARD INDICATOR (all unit classes)

Lower risk						Higher risk	
←							
Typically lower rew	<i>r</i> ards				Туріс	cally higher rewards	
1	2	3	4	5	6	7	

This indicator aims to give you a measure of the price movement of the Fund based on past data. It uses historic returns over the last five years. If five years' data is not available, simulated data based on a representative portfolio is used.

The Fund has been measured as 4 because its investments have experienced moderate volatility in the past. During the period the synthetic risk and reward indicator has remained unchanged.

for the six month period ended 30 June 2024

Basis for preparation

The interim financial statements have been prepared in compliance with Financial Reporting Standard 102 (FRS102) and in accordance with the Statement of Recommended Practice (SORP) for UK Authorised Funds issued by The Investment Association in May 2014 and amended in June 2017.

The interim financial statements are prepared in sterling, which is the functional currency of the Fund. Monetary amounts in these financial statements are rounded to the nearest pound.

The interim financial statements have been prepared on the historical cost convention, modified to include the revaluation of investments and certain financial instruments at fair value.

Accounting policies

The accounting policies applied are consistent with those of the annual financial statements for the year ended 31 December 2023 and are described in those annual financial statements.

The investments of the Fund have been valued at their fair value at 12 noon on 28 June 2024.
